# TEMPLATE FOR PROGRAMME SPECIFICATION

## HIGHER EDUCATION PERFORMANCE REVIEW: PROGRAMME REVIEW

### PROGRAMME SPECIFICATION

This Programme Specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. It is supported by a specification for each course that contributes to the programmer.

|   |   |
|---|---|
| <b>1. Teaching Institution</b>  | University of Anbar   |
| <b>2. University Department</b>   | College of education for pure science- Mathematics              |
| <b>3. Programmer Title</b>  | Education Mathematic Sciences                                   |
| <b>4. Title of Final Award</b>  | Master of Education Mathematic Sciences                         |
| <b>5. Modes of Attendance offered</b>   | Quarterly   |
| <b>6. Accreditation</b>   | Nothing   |
| <b>7. Other external influences</b>   | University application - practical graduation research projects |
| <b>8. Date of production</b>  | 1/9/2023  |
| <b>9. Aims of the Programmer</b>  |   |
| 1. Achieving the specified standards for the quality of material, human, technical and financial resources.   |   |
| 2. Providing an efficient administrative staff that knows its duties and powers according to the work structures and regulations, in which the requirements of the job description are fulfilled. |   |
| 3. Providing a specialized teaching staff who is fluent in using modern techniques and methods in education with good job satisfaction.   |   |
| 4. Preparing academic programs in accordance with international academic standards and providing their knowledge, training and technical requirements.  |   |
| 5. Preparing students with scientific, practical and educational knowledge that meets the needs of the labor market.  |   |
| 6. Paying attention to scientific research in terms of laboratory, research and researcher in order to achieve a distinguished research reputation locally and globally.                          |   |
| 7. Research and professional openness to community institutions to meet their needs and aspirations.  |   |
| 8. Evaluate all individuals and processes to ensure quality performance and continuous improvement.   |   |

## **10. Learning Outcomes, Teaching, Learning and Assessment Methods**

### **A1. Knowledge and Understanding**

- A1. Enable the graduate student to acquire theoretical knowledge of Mathematics.
- A2. Empowering the graduate student how to teach and ways of communicating scientific information to grudaute students.
- A3. The student's knowledge of the methods of measurement and evaluation and methods of modern teaching methods in Mathematics.
- A4. The graduate student is acquainted with the educational material by providing it electronically in the virtual classroom. In addition to enabling the student to know the learning theories related to the ages of students for the secondary school stage.

### **B. Subject-specific skills**

- B1. Gaining knowledge and enriching the student with the methods of laboratory work.
- B2. Orienting the student to the scientific method in solving all scientific problems.
- B3. Knowing the objectives and origins of the art of teaching chemistry.
- B4. Enabling students to acquire the skills of using virtual classrooms

### **Teaching and Learning Methods**

- 1. The method of listening and thinking deeply in order to understand the problem to solve it.
- 2. The method of scientific discussion and meaningful dialogue.
- 3. Adopting the method of monthly and final exams and submitting weekly reports.

### **Assessment methods**

- 1. The treatment method using final scores.
- 2. Random and surprise tests.
- 3. Teaching tasks in the virtual classroom.

### **C. Thinking Skills**

- C1. Adopting the method of dialogue between the student and the professor.
- C2. Interest in research projects and preparing organized reports
- C3. Adopt the method of discussion. (Performance tests and seminars).
- C4. Adopting e-learning to provide an interesting and flexible learning environment.

### **Teaching and Learning Methods**

- 1. Method of application in research laboratories
- 2. Adopting the method of constructive dialogue and discussion
- 3. Adopt the trial-and-error method.
- 4. The adoption of multimedia in the virtual classes (image, text, audio, video)

### **Assessment methods**

1. Preparation of the seminar (graduation research)
2. Adoption of the grading method as a basis in the evaluation process.
3. Adoption of the test method.
4. Adopting the method of discussions and dialogues between the students and the professor.
5. Create a test task in the virtual classes.

### **D. General and Transferable Skills (other skills relevant to employability and personal development)**

D1- That the student benefit from his learning and embody this in his personal and professional development.

D2- That the student is able to employ the knowledge he receives during the study stage.

D3- That the student benefit from theoretical knowledge in employing the teaching profession and mastering it in a concept-based manner.

Fundamentals of teaching chemistry.

D4 - Skills of modern technologies in communication, documentation and communication.

### **Teaching and Learning Methods**

1. Field visits in laboratories.
2. Scientific application in laboratories.
3. Take advantage of graduation research.
4. Presentation and presentation of educational content in virtual classes using multimedia (video, recorded lecture).

### **Assessment Methods**

1. Articles and periodical research
2. The interview
3. Final exams
4. Determining study tasks and duties periodically and regularly in the virtual classroom

## 11. Programmer Structure

| Level/<br>Year                             | Course or<br>Module Code | Course or Module Title                             | Weekly hours |      |
|--|--------------------------|--|--------------|------|

|  | <b>MAT508</b>            | <b>Options class</b>                               | 2            | -    |
|  | <b>MAT509</b>            | <b>Advance Computer</b>                            | 2            | -    |
|  | <b>MAT510</b>            | <b>English language</b>                            | 2            | -    |
|  | <b>MAT511</b>            | <b>Scientific Research<br/>methodology</b>         | 2            | -    |
|  | <b>MAT512</b>            | <b>Teaching Theorem</b>                            | 2            | -    |
|  | <b>MAT513</b>            | <b>Seminar</b>                                     | 2            | -    |
|  | <b>MAT514</b>            | <b>Technological Information</b>                   | 2            | -    |
| <b>Research<br/>class</b>                  | <b>MAT201</b>            | <b>Thesis Project</b>                              | 4            | -    |

### **13. Personal Development Planning**

1. Using modern scientific sources.
2. Using rapid communication networks to transfer information such as the Internet.
3. Visits and practical practices in service laboratories.
4. Acquisition of scientific and modern experiences and skills in the field of modern technical communication

### **14. Admission criteria**

1. Admission according to the general and central average system.
2. Admission to departments is according to the student's desire and is modified.
3. It is a condition for a graduate of the preparatory school and the scientific stream exclusively.
4. The accepted graduate student's personal and mental integrity and freedom from physical impairments

### **15. Key sources of information about the programmer**

1. Curriculum books approved by the Sectorial Committee of the Faculties of Education for Pure Sciences.
2. Helping books.
3. Books and archaeological resources / sources in the English language.
4. Additional sources from the Internet.
5. The training courses held by the university on e-learning platforms.

## Course description Sample

### Reviewing the performance of higher education institutions ((academic program review))

This course description provides a succinct summary of the most important course characteristics and the learning outcomes the student is expected to achieve. Demonstrating whether they have made the most of the learning opportunities available. It must be linked to a description the program.

|   |   |
|---|---|
| <b>Educational institution</b>            | <b>Anbar University - College of Education for Pure Sciences</b>        |
| <b>University department/center</b>       | <b>College of Education for Pure Sciences/Department of Mathematics</b> |
| <b>Course name/code</b>                   | <b>Advanced Mathematical Statistics - \MAT503</b>                       |
| <b>Programs in which it is included</b>   | <b>Master of Mathematics</b>  |
| <b>Available attendance forms</b>         | <b>Daily</b>  |
| <b>Semester/year</b>                      | <b>Quarterly</b>  |
| <b>Number of study hours (total)</b>      | <b>30</b>   |

#### **Course objectives:**

- 1- For students to become familiar with the types of Advanced Mathematical Statistics.**
- 2- Transferring from the description stage to the decision-making stage and logical interpretation of the results.**
- 3- The course is concerned with studying an introduction to estimation theory (by point or by period) and how to obtain it.**
- 4-The concept of hypothesis testing, some probability distributions, sampling distribution theory, finding the critical region, optimal test power, and the Neyman-Pearson theorem.**
- 5-Informing students about Mathematical Statistics, and to show students the most important applications of mathematical statistics.**

**Learning outcomes, teaching, learning and assessment methods**

## A- Knowledge and understanding

A1- Knowledge of the topics on which understanding of the course depends (functions, differentiation, integration (especially integral by division), exponential functions, logarithm concepts, double integration, and famous series).

A2- Knowing the foundations and basic concepts of probability and statistics in mathematics, the type of distribution required that is appropriate for the data, and choosing the appropriate method to find its characteristics.

A3- Knowing the foundations and methods of establishing the estimator and how to estimate its two types, point and period.

A4- Bringing the student to a level where he has the ability to interpret the results (research) and turn them into a work reality, from which he will benefit in the future during study and after graduation .

### Teaching and learning methods

**Blackboard + pen + data show**

## B- Subject-specific skills

B1 - Developing the student's mathematical and statistical skills and preparing him scientifically to be a successful statistician.

B2 - Developing the skill of estimation, hypothesis testing, and statistical analysis as functions of the statistical analyst.

B3 - Developing the student's decision-making skill as it is the essence of the educational and statistical process.

## C- Thinking skills

External tests 2- Various and interconnected questions to test the student's skills

### Teaching and learning methods

Blackboard + Pen + data show +Electronically on some e-learning programs such as Google Form and other forms+ Extrapolation, Analysis+ Conclusion+ The lecture Empowerment+ Discussion.

### Evaluation methods

### Daily and monthly examination

## General and transferable skills (other skills related to employability and personal development

| person written questions                         | a video lecture, a text lecture, a live broadcast.        | The final assessment   | The student learns the extent of his understanding of the material through a comprehensive review | 2 | 15 |
|  |   |  |   |   |    |

1- Developing curricula by continuously keeping pace with the development taking place in the academic programs of the corresponding departments in international universities in the nature of the academic subjects that meet the need and the extent to which they cover the requirements of the productive and academic activities of the beneficiaries.

2- Work to enhance the student's self-confidence by focusing on positive behaviors and effective contributions to building a personality that is aware of its role in developing society and capable of carrying scientific and moral integrity in their professional lives.

3- Ensuring the exchange of experiences and visits made by the teaching staff to universities and colleges outside Iraq play a helpful role in formulating curricula to serve the development of the educational process.

| <b>Course objectives:</b>  |   |
| This course aims to develop students' skills with regard to the subject of analyzing the reliability of machines and the amount of time to reach a machine failure state, and to learn about the probability distributions related to failure models, as well as to learn about systems and their types, and how to calculate their reliability, and then study methods for estimating reliability, and finally learn how to calculate Maintenance time. |   |
| 3-Informing students about Relaiability, and to show the graduate students the most important applications of survival analysis.   |   |

### Learning outcomes, teaching, learning and assessment methods

A- Knowledge and understanding

A1- Knowledge of the topics on which understanding of the course depends

(functions, differentiation, integration (especially integral by division), exponential functions, logarithm concepts, double integration, and famous series.

A2- Knowing the foundations and basic concepts of probability and statistics in mathematics, the type of distribution required that is appropriate for the data, and choosing the appropriate method to find its characteristics.

A3- Knowing the foundations and methods of establishing the estimator and how to estimate its two types, point and period.

A4- Bringing the student to a level where he has the ability to interpret the results (research) and turn them into a work reality, from which he will benefit in the future during study and after graduation.

Teaching and learning methods

**Blackboard + pen + data show**

**B- Subject-specific skills**

B1 - Developing the student's mathematical and statistical skills and preparing him scientifically to be a successful statistician.

B2 - Developing the skill of estimation, hypothesis testing, and statistical analysis as functions of the statistical analyst.

B3 - Developing the student's decision-making skill as it is the essence of the educational and statistical process.

**C- Thinking skills**

External tests 2- Various and interconnected questions to test the student's skills

**Teaching and learning methods**

| <b>Number of study hours (total)</b>   | <b>30</b>   |
| <b>Date this description was prepared</b>  | <b>2023-2024</b>  |
| <b>Course objectives:</b>  |   |
| 1- Emphasizing the importance of the topic of advanced complex analysis in relation to other sciences..                  |   |
| 2- For graduate students to become familiar with the types of advanced complex analysis                                  |   |
| 3-Informing students about advanced complex analysis, the axioms of sub ordinate , and advanced complex analysis spaces. |   |
| 4-To show students the most important applications of advanced complex analysis  |   |

### Learning outcomes, teaching, learning and assessment methods

#### A- Knowledge and understanding

- 1-That the graduate student understands what is meant by advanced complex analysis
- 2-The student should distinguish between types of advanced complex analysis
- 3-For the student to recognize the relationship between continuous functions and isomorphism
- 4-For the student to become familiar with the types of complex number axioms

|   |
|---|
| 5-For the student to become familiar with the concept of complex and compact spaces and interconnected spaces and their applications  |
| <b>Teaching and learning methods</b>  |
| <b>Blackboard + pen + data show</b>   |
| <b>B- Subject-specific skills</b>   |
| <p>1-That the student can distinguish between different <b>advanced complex analysis</b></p> <p>2-That the student can distinguish between continuous, open, and closed functions.</p> <p>3-That the student can distinguish between the axioms of separation and reach the relationships between these spaces</p> <p>4-The student must have the necessary skill to solve problems using basic concepts.</p> <p>5-That the student is able to understand compact and interconnected spaces and their connections to other spaces</p> |
| <p><b>C- Thinking skills</b></p> <p>External tests 2- Various and interconnected questions to test the student's skills</p>   |

| <b>Educational institution</b>  | <b>Anbar University - College of Education for Pure Sciences</b>        |
| <b>University department/center</b>   | <b>College of Education for Pure Sciences/Department of Mathematics</b> |
| <b>Course name/code</b>   | <b>Advanced Modules<br/>MAT507</b>                                      |
| <b>Programs in which it is included</b>   | <b>Master of Mathematics</b>  |
| <b>Available attendance forms</b>   | <b>Daily</b>  |
| <b>Semester/year</b>  | <b>Quarterly</b>  |
| <b>Number of study hours (total)</b>  | <b>30</b>   |
| <b>Date this description was prepared</b>   | <b>2023/2/10</b>  |
| <b>Course objectives:</b>   |   |
| 1- Emphasizing the importance of the topic of advanced module in relation to other sciences.. |   |
| 2- For graduate students to become familiar with the types of advanced modules                |   |
| 3- Informing students about advanced modules, the types of modules.                           |   |
| 4- To show students the most important applications of advanced modules                       |   |

|   |
|---|
| <b>Learning outcomes, teaching, learning and assessment methods</b>   |
| <b>A- Knowledge and understanding</b>   |
| 1- That the graduate student understands what is meant by advanced modules                                    |
| 2- The student should distinguish between types of advanced modules   |
| 3- For the student to recognize the relationship between three theorems of isomorphism                        |
| 4- For the student to become familiar with the types of modules   |
| 5- For the student to become familiar with the concept of module and commutative group and their applications |
| <b>Teaching and learning methods</b>  |

|   |

| <b>9:Course objectives</b><br><b>Advance functional analysis aims to increase the knowledge of Postgraduate/Master's students in the Department of Mathematics regarding mathematics topics</b><br><b>Purely, which relies on previous topics such as linear traction and mathematical analysis, and opens horizons for students</b><br><b>Knowledge of types of spaces and their related applications</b> |  |
|  |  |

## A- Knowledge and understanding

A1- Knowledge of the topics on which understanding of the course depends (Linear spaces, metric spaces, inner product spaces and Hilbert space).

A2- Knowing the foundations and basic concepts of functional analysis advanced in mathematics and appropriate method to find its characteristics.

A3- Knowing the foundations and methods of establishing the estimator and how to estimate its two types, point and period.

A4- Bringing the student to a level where he has the ability to interpret the results (research) and turn them into a work reality, from which he will benefit in the future during study and after graduation.

Teaching and learning methods

**Blackboard + pen + data show**

## B- Subject-specific skills

B1 - Developing the student's mathematical and statistical skills and preparing him scientifically to be a successful statistician.

B2 - Developing the skill of estimation, hypothesis testing, and statistical analysis as functions of the statistical analyst.

B3 - Developing the student's decision-making skill as it is the essence of the educational and statistical process.

## C- Thinking skills

External tests 2- Various and interconnected questions to test the student's skills

**Teaching and learning methods**

Blackboard + pen + data show +Electronically on some e-learning programs such as Google Form and other forms+ Extrapolation, Analysis+ Conclusion+ The lecture Empowerment+ Discussion.

**Evaluation methods**

## **Daily and monthly examinations**

### **General and transferable skills (other skills related to employability and personal development.**

#### A- Knowledge and understanding

A1- Knowledge of the topics on which understanding of the course depends (functions, differentiation, integration (especially integral by division), exponential functions, logarithm concepts, double integration, and famous series.

A2- Knowing the foundations and basic concepts of probability and statistics in mathematics, the type of distribution required that is appropriate for the data, and choosing the appropriate method to find its characteristics.

A3- Knowing the foundations and methods of establishing the estimator and how to estimate its two types, point and period.

A4- Bringing the student to a level where he has the ability to interpret the results (research) and turn them into a work reality, from which he will benefit in the future during study and after graduation.

#### **Teaching and learning methods**
