Academic Program Description Form

Reviewing the performance of higher education institutions
(((review of the academic program

This description of the academic program provides a brief summary of the most important characteristics of the program and the learning outcomes expected of the students to achieve, demonstrating whether he/she has made maximum use of the available opportunities. It is accompanied by a description of each course within the program

| | |
|-----------------------------------|------------------------------------|
| The educational institution | University of Anbar |
| University Department/Center | College of Engineering |
| Academic Program | Electrical Engineering Department |
| The name of the final certificate | Bachelor of Electrical Engineering |
| The academic system | Semester |
| Accredited Accreditation Program | N/A |

| | |
|---|---------------|
| external influences | N/A |
| The date of preparing the description 10/14/2019 AD | AD 10/14/2019 |
| Academic Program Objectives: The academic program in the :Electrical Engineering Department aims to | |
| Building the student scientifically and practically and qualifying.1 .him in the field of electrical engineering | |
| Building and preparing the student psychologically to play his.2 .role as a reliable engineer in his field of specialization | |
| Building students who are able to compete with other engineers.3 for job opportunities and obtain the seats required to complete .postgraduate studies | |
| The possibility of applying for external tests by local, regional or.4 international bodies for the purpose of completing study or .appointment | |
| Urging the student to be creative and think about specialization.5 .projects and keep pace with the development in this field | |
| Providing students with scientific, practical and self-skills that.6 enable them to solve practical problems and deal with them with .scientific concepts | |

Program.1

| Credit hours and units | course name | course code | Study stage Course |

Course Description Form

**Review the performance of higher education institutions
((Academic Program Review))**

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|--|---|
| 1. Educational institution | Anbar University / College of Engineering |
| 2. University Department / Center | Department of Electrical Engineering |
| 3. Course Name/Code | Applied Physics/EE1304 |
| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class/ Blended |
| 6. Semester / Year | Second / First Academic Year |

| | |
|---|-----------|
| 7. Number of Credit Hours (Total) | 30 |
| 8. The preparation date of this description | 22/6/2022 |
| 9. Course Objectives : | |
| <ul style="list-style-type: none"> - Learn the fundamental concepts of physical laws and how to apply them: - Study the basic concepts of physical laws and how to apply them. - Learn some important physical laws relevant to the stability and motion of objects: - Acquire knowledge of some important physical laws concerning the stability and motion of objects. - Learn the types of renewable energies and their forms in the modern physics era and evolution: - Understand the types of renewable energies and their development in the modern era of physics. - Learn modern mathematical methods for solving physics problems: - Grasp modern mathematical techniques for solving physics problems. | |
| | |

| |
|--|
| 10. Learning outcomes and teaching, learning and assessment methods |
| A. Knowledge and understanding |
| <p>-Teaching the student how to apply physics problems and solve them in real-life situations.</p> <p>-Introducing the student to various problems in electrical systems and their</p> |

connection to the field of physics.

-Educating the student about the importance of using laws to find essential variables in any system or object.

-Understanding how to prove physical laws through practical experiments and theoretical and practical implementation.

Assessment methods:

- Learning how to deal with physical theories, inferencing methods, and practical applications.

- Learning how to use computers, if possible, to solve physics problems.

- Solving a real-life physics problem using a physical law.

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

-Solving exercises related to electrical physics.

-Assigning students various group activities and assignments.

-Allocating a portion of the grade for daily assignments and tests.

E. Thinking skills

- Develop the student's ability to work on performing duties and deliver them on time.
- Try to apply concepts by solving different types of exercises.
- Opening the way for the student to provide what he sees regarding the material.

F. General and transferable skills (other skills related to employability and personal development).

- Developing the student's ability to deal with academic curricula in applied physics.
- Developing the student's ability to deal with the Internet.
- Developing the student's ability to deal with multiple means.

11. Course Structure

| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
|----------|-------|--|----------------------------------|--------------------------|---|
| 1 | 3 | Electric charge and electric field | Unit-1 | Theoretical + Discussion | General questions and discussion |
| 2 | 3 | Coulomb's law | 3 | Theoretical + Discussion | General written and oral questions and discussion |
| 3 | 3 | Electric Field of a Continuous Charge Distribution and Due to a Charged Rod | 3 | Theoretical + Discussion | discussion |
| 4 | 3 | Electric Field Lines and Motion of Charged Particles in a Uniform Electric Field | 3 | Theoretical + Discussion | Exam I am general questions and discussion |

| | | | | | |
|----|---|--|---|--------------------------|--|
| 5 | 3 | Electric Flux | 3 | Theoretical + Discussion | General questions and discussion or exam I |
| 6 | 3 | Gauss's Law | 3 | Theoretical + Discussion | General questions and discussion |
| 7 | 3 | Application of Gauss's Law to Various Charge Distributions and Conductors in Electrostatic Equilibrium | 3 | Theoretical + Discussion | Monthly exam |
| 8 | 3 | Formal Derivation of Gauss's Law | 3 | Theoretical + Discussion | Discussion with to give collective duties |
| 9 | 3 | Potential Difference and Electric Potential and Potential Differences in a Uniform Electric Field | 3 | Theoretical + Discussion | General Questions |
| 10 | 3 | Electric Potential and Potential Energy Due to Point Charges and Obtaining the Value of the Electric Field from the Electric Potential | 3 | Theoretical + Discussion | General questions and discussion |
| 11 | 3 | Electric Potential Due to Continuous Charge Distributions and Electric Potential Due to a Charged Conductor | 3 | Theoretical + Discussion | General Questions |
| 12 | 3 | Definition of Capacitance and Calculating Capacitance | 3 | Theoretical + Discussion | General questions and discussion |
| 13 | 3 | Combinations of Capacitors And Energy Stored in a Charged | 3 | Theoretical + Discussion | General Questions |
| 14 | 3 | Capacitors with Dielectrics and Electric Dipole in an Electric Field | | Theoretical + Discussion | Monthly exam |

| | | | | | |
|----|---|------------------------------------|--|--------------------------------|-----------|
| 15 | 3 | Electric Current And Resistance | | Theoretical + Discussion | Oral exam |
|----|---|------------------------------------|--|--------------------------------|-----------|

| 12.Infrastructure | |
|---|--|
| Required readings: <ul style="list-style-type: none"> • Course Books • Other | R.D. Knight, Physics for Scientists and Engineers, 2nd ed., Pearson 2008 |
| special requirements | |
| Social services (e.g. guest lectures, vocational training and field studies) | |

| 13.Acceptance | |
|--------------------------------|---------------|
| Prerequisites | <i>EE1201</i> |
| Minimum number of students | 20 |
| The largest number of students | 100 |

Course Description Form

Review the performance of higher education institutions ((review of the academic program))

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve. Prove whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|---|
| 1. Educational institution | Anbar University / College of Engineering |
| 2. University Department / Center | Department of Electrical Engineering |
| 3. Course Name/Code | Engineering Drawing / EE1206 |
| 4. Programs in which he enters | |
| 5. Available Attendance Forms | Blended learning |
| 6. Semester / Year | second Semester / First Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 20/9/2022 |
| 9- Course Objectives: | |

10. Learning outcomes and teaching, learning and assessment methods

Raising and developing the student's mental and expressive skills in the language of drawing.

Training on accuracy in measurements and drawing speed.

Raising and improving the student's ability to visualize and imagine in representing objects geometrically.

B - Subject-specific skills

B1 – Scientific Reports

B2 – Graduation Research

Teaching and learning methods

- Continuous sudden and weekly daily tests.

- Exercises and activities in the classroom.

- Guiding students to some sources that contain examples and exercises to benefit from them.

Evaluation methods

Participation in the classroom.

Submission of activities

Quarterly tests, activities and activities.

C- Thinking skills

C1 - Developing the student's ability to work on performing duties and delivering them on time.

C2- Try to apply concepts by solving different types of exercises.

C3- Developing the student's ability to dialogue and discussion.

Teaching and learning methods

- Exercises and practical problems
- Assigning the student some group activities and duties.
- Allocate a percentage of the grade for daily assignments and tests.

Evaluation methods

- Active participation in the classroom is a guide to student commitment and responsibility.
- Commitment to the deadline in submitting assignments and research.
- Quarterly and final exams express commitment and achievement of knowledge and skills.
- Apps, exercises and daily assignments

d. General and transferable skills (other skills related to employability and personal development).

D1- Developing the student's ability to deal with the means of technology.

D2- Developing the student's ability to deal with the Internet.

D3- Developing the student's ability to deal with multiple means.

D4- Developing the student's ability to dialogue and discussion.

11. Course Structure

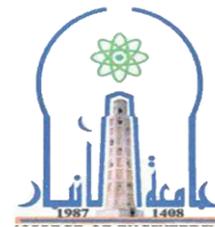

| Evaluation method | Method of education | Name of the unit/course or topic | Required Learning Outcomes | Hours | The week |
|--|----------------------------|---|--|--------------|-----------------|
| General questions and discussion | Theoretical + Discussion | Engineering drawing | Introduction to Engineering Drawing and Design, Drawing Tools | 4 | First |
| General questions and discussion or exam I | Theoretical + Discussion | Engineering drawing | Lines in engineering drawing | 4 | Second |
| General questions and discussion | Theoretical + Discussion | Engineering drawing | Geometric line, panel layout | 4 | Third |
| I'm examined. | Theoretical + Discussion | Engineering drawing | Engineering Operations | 4 | Fourth |
| General questions and discussion or exam I | Theoretical + Discussion | Engineering drawing | Exercises in engineering processes | 4 | Fifth |
| General questions and discussion | Theoretical + Discussion | Engineering drawing | Projection theory | 4 | Sixth |
| General Questions | Theoretical + Discussion | Engineering drawing | Drawing projections | 4 | Seventh |
| Group duties | Theoretical + Discussion | Engineering drawing | Exercises in drawing projections | 4 | Eighth |
| General Questions | Theoretical + Discussion | Engineering drawing | Midterm Exam | 4 | Ninth |

| | | | | | |
|--------------------------|--------------------------|---------------------|---|---|------------|
| Monthly exam | Theoretical + Discussion | Engineering drawing | Exercises in drawing projections | 4 | Tenth |
| General Questions | Theoretical + Discussion | Engineering drawing | Dimensional mode | 4 | Eleventh |
| Discussion and exam I | Theoretical + Discussion | Engineering drawing | Exercises in drawing projections | 4 | Twelfth |
| General Questions | Theoretical + Discussion | Engineering drawing | Holographic projection | 4 | Thirteenth |
| Group Duties+ discussion | Theoretical + Discussion | Engineering drawing | Exercises in measured drawing | 4 | Fourteenth |
| Monthly exam | Theoretical + Discussion | Engineering drawing | Assembly | 4 | Fifteenth |

| 2. University Department / Center | Department of Electrical Engineering |
| 3. Course Name/Code | Calculus I / EE1201 |
| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class |
| 6. Semester / Year | First / First Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 23/6/2022 |

9. Course Objectives :

- This course aims to provide the student with the skill of dealing with mathematical equations and graphing the functions.
- Demonstrate methods for solving limits and continuity functions with the meaning of the concept of horizontal and vertical asymptotes.
- The course aims to clarify the concept of differentiation function and the techniques of differentiation with a study of the applications of derivatives.
- The course aims to give the student a new background that he can benefit from when studying differential equations.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- To develop mathematical skills so that students can sketch the graph of various functions and evaluate Limits using different techniques including L'Hopital's Rule.
- Apply mathematical methods and principles in solving various derivative problems from Engineering fields, involving applications of derivatives.
- Demonstrate algebraic facility with algebraic topics including linear, quadratic, exponential, logarithmic, and trigonometric functions,
- Compute derivative and anti-derivative of algebraic, trigonometric, inverse trigonometric, exponential, and logarithmic with apply them to solve problems in a wide range of engineering applications.

B. Subject-specific skills

- Assigning the student to some group activities and duties.
- Allocating a percentage of the grade to daily assignments and tests.

C. Teaching and learning methods

- Sudden daily and continuous weekly tests.
- Trainings and activities.

9. Course Objectives :

- This course aims to provide the student with the skill of dealing with integral functions and clarifying the concept of integration, the polar, and Cartesian coordinates.
- Demonstrate methods for solving integrals and series.
- The course aims to study the applications of integration in calculating the lengths of curves, areas, and volumes in different coordinates and some physical applications.
- The course aims to give the student a new background that he can benefit from when studying double and triple integrals.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Evaluate definite, indefinite, and improper integrals by using different integration techniques.
- To determine arc length, surface area, and volume by using the applications of integration techniques.
- Define polar coordinate graphs and solve related problems including area, arc length, and volume.
- Identify the properties of sequences and their limits by identifying standard convergent operations of power series.

B. Subject-specific skills

- Assigning the student to some group activities and duties.
- Allocating a percentage of the grade to daily assignments and tests.

C. Teaching and learning methods

- Sudden daily and continuous weekly tests.
- Trainings and activities.
- Directing students to some sources that contain examples and exercises to benefit from them.

| 7. Number of Credit Hours (Total) | 45 |
| 8. The preparation date of this description | 14-10-2023 |
| 9. Course Objectives: This course provides students with a working knowledge of fundamental statistics principles and probability in addition to a preface to the regression and correlation analysis. By the end of the semester, students should be able to determine when each of the various topics we have covered is appropriate to use, and to apply them to practical engineering situations or problems. This course will cover techniques on data collection and presentation, descriptive statistics, basic elements of probability theory, sampling techniques and theory, statistical estimation, hypothesis testing and regression analysis. | |
| 10. Learning outcomes and teaching, learning and assessment methods | |
| A. Knowledge and understanding | |
| use a number of methods and techniques for collecting and presentation the sets of data; calculation and demonstration the center tendency and variation of data; compute the probabilities in a simple case and using the rules of probability in computing; give an account of the concept random variable and be able to use some common probability distributions; understand the meaning of the central limit theorem; use point and interval estimates for some typical statistical problems. apply elementary regression for fitting measured data. | |

Review the performance of higher education institutions ((review of the academic program))

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve. Prove whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|--|
| 1. Educational institution | University of Anbar / College of Engineering |
| 2. University Department / Center | Electrical Engineering Department |
| 3. Course Name/Code | Fundamentals of Electronics I / EE2308 |
| 4. Programs in which he enters | |
| 5. Available Attendance Forms | Traditional class |
| 6. Semester / Year | First Semester / Second Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The history of preparation of this description | 23/6/2022 |

9- Course Objectives:

This course provides the student with the fundamental skills to understand the basics of semiconductor devices such as diode and transistor.

- To understand the working of diode and transistor.
- To study different biasing techniques to operate diode and transistor.

- Analyze output in different operating modes of different semiconductor devices.
- Compare design issues, advantages, disadvantages, and limitations of basic electronics.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

At the end of the course student will be able to:

- Will be able to explain basic operating principle of diodes.
- Explains ideal diode, equivalent circuit, and dc characteristic of a diode.
- Recognize half-wave, full wave, clipping and clamping circuits.
- Will be able to tell the structure and the operation of transistors and recognize the different types of transistors.
- Explains the operation of transistor dc biasing circuits.
- Calculates the parameters of the equivalent circuit of transistor.

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Daily exams.
- Participation in the lecture
- Submission of activities
- Semi-semester and monthly exams.

E. Thinking skills.

- Developing the student's ability to work on performing duties and delivering them on time.
- Try to apply concepts by solving different types of exercises.
- Developing the student's ability to dialogue and discussion.

- Opening the way for the student to provide what he sees regarding the material.

F. General and transferable skills (other skills related to employability and personal development).

- Developing the student's ability to deal with the means of technology.
- Developing the student's ability to deal with the Internet.
- Developing the student's ability to deal with electronic devices.
- Developing the student's ability to deal with diode and transistor.

| 8. The preparation date of this description | 23/6/2022 |

9- Course Objectives:

This course provides the student with the fundamental skills to understand the basics of semiconductor devices such as diode and transistor.

- To understand the working of diode and transistor.
- To study different biasing techniques to operate diode and transistor.
- Analyze output in different operating modes of different semiconductor devices.
- Compare design issues, advantages, disadvantages, and limitations of basic electronics.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

At the end of the course student will be able to:

- Will be able to explain basic operating principle of diodes.
- Explains ideal diode, equivalent circuit, and dc characteristic of a diode.
- Recognize half-wave, full wave, clipping and clamping circuits.
- Will be able to tell the structure and the operation of transistors and recognize the different types of transistors.
- Explains the operation of transistor dc biasing circuits.
- Calculates the parameters of the equivalent circuit of transistor.

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Continuous sudden and weekly daily tests.
- Trainings and activities.
- Guiding students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Daily exams.
- Participation in the lecture
- Submission of activities
- Semi-semester and monthly exams.

E. Thinking skills

- Developing the student's ability to work on performing duties and delivering

them on time.

- Try to apply concepts by solving different types of exercises.
- Developing the student's ability to dialogue and discussion.
- Opening the way for the student to provide what he sees regarding the material.

F. General and transferable skills (other skills related to employability and personal development).

- Developing the student's ability to deal with the means of technology.
- Developing the student's ability to deal with the Internet.
- Developing the student's ability to deal with electronic devices.
- Developing the student's ability to deal with diode and transistor.

Course Description Form

Review the performance of higher education institutions ((review of the academic program))

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve. Prove whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|--|
| 1. Educational institution | University of Anbar / College of Engineering |
| 2. University Department / Center | Electrical Engineering Department |
| 3. Course Name/Code | Electro-Magnetics II / EE2316 |
| 4. Programs in which he enters | |
| 5. Available Attendance Forms | E- presence |
| 6. Semester / Year | Second Semester / Second Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 23/6/2022 |

9- Course Objectives:

10. Learning outcomes and teaching, learning and assessment methods

- a. Preparing engineering staff in the field of electrical engineering
- b. Preparing qualified engineers in the implementation of projects and maintenance
- c. Providing engineering consultations and expertise.
- d. Instilling professional ethics in the hearts of graduates to spare them corruption and deviation.

B - Subject-specific skills

B1 – Scientific Reports

B2 – Graduation Research

Teaching and learning methods

- Continuous sudden and weekly daily tests.
- Trainings and activities.
- Guiding students to some sources that contain examples and exercises to benefit from them.

Evaluation methods

Participation during the lecture.

Submission of activities

Quarterly tests, activities and activities.

C- Thinking skills

C1 - Developing the student's ability to work on performing duties and delivering them on time.

C2- Try to apply concepts by solving different types of exercises.

C3- Developing the student's ability to dialogue and discussion.

Teaching and learning methods

- Exercises and practical problems
- Assigning the student some group activities and duties.
- Allocate a percentage of the grade for daily assignments and tests.

Evaluation methods

- Active participation in the classroom is a guide to student commitment and responsibility.
- Commitment to the deadline in submitting assignments and research.
- Quarterly and final exams express commitment and achievement of knowledge and skills.
- Apps, exercises and daily assignments

d. General and transferable skills (other skills related to employability and personal development).

D1- Developing the student's ability to deal with the means of technology.

D2- Developing the student's ability to deal with the Internet.

D3- Developing the student's ability to deal with multiple means.

D4- Developing the student's ability to dialogue and discussion.

11. Course Structure

| Evaluation method | Method of education | Name of the unit/course or topic | Required Learning Outcomes | Hours | The week |
|--|--------------------------|----------------------------------|--|-------|----------|
| General questions and discussion | Theoretical + Discussion | Areas 2 | The steady magnetic field | 4 | First |
| General questions and discussion or exam I | Theoretical + Discussion | = | Biot- savat law | 4 | Second |
| General questions and discussion | Theoretical + Discussion | = | Amperes circuital law & their applications | 4 | Third |
| I'm examined. | Theoretical + Discussion | = | Magnetic flux & magnetic flux density | 4 | Fourth |
| General questions and discussion or exam I | Theoretical + Discussion | = | CURL | 4 | Fifth |
| General questions and discussion | Theoretical + Discussion | = | Stoke's theorem | 4 | Sixth |
| General Questions | Theoretical + Discussion | = | The scalar & vector magnetic potential | 4 | Seventh |
| Group duties | Theoretical + Discussion | = | Magnetic forces & derivation of the steady magnetic field laws | 4 | Eighth |

| | | | | | |
|--------------------------|--------------------------|---|--|---|------------|
| General Questions | Theoretical + Discussion | = | Time varying field & Maxwell's equation, Faraday's law | 4 | Ninth |
| Monthly exam | Theoretical + Discussion | = | Moving conductor in a magnetic field & general case of induction | 4 | Tenth |
| General Questions | Theoretical + Discussion | = | Displacement current & conduction current | 4 | Eleventh |
| Discussion and exam I | Theoretical + Discussion | = | Maxwell's equations in point form | 4 | Twelfth |
| General Questions | Theoretical + Discussion | = | Maxwell's equations in integral form | 4 | Thirteenth |
| Group Duties+ discussion | Theoretical + Discussion | = | Boundary condition | 4 | Fourteenth |
| Monthly exam | Theoretical + Discussion | = | Boundary condition | 4 | Fifteenth |

| 3. Course Name/Cod e | Electric Circuits I / EE2310 |
| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional Class |
| 6. Semester / Year | First Course of Academic Year (2021-2022) |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 12/10/2022 |
| 9. Course Objectives: | |
| | This course is a first course on electric circuits. The course is designed to provide |

students with an importance for electrical engineering field: Natural and Step Response of RL and RC Circuits, Sequential Switching; Natural and Step Response of Parallel and Series RLC Circuits. Operation Amplifiers. Balanced Three-Phase Circuits, Analysis of circuits (Wye, Delta); Power Calculations. Unbalanced Three-Phase systems.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Analyze inverting, summing, and noninverting Op amp circuits.
- Analyze and determine the complete response of RL, RC and RLC circuits
- Understand 3-phase system and its power calculation.
- Apply delta–wye or wye–delta transformation in Three-Phase Circuits as necessary to simplify circuit analysis

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

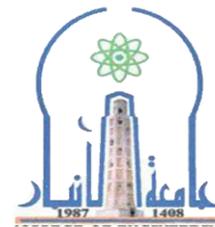

D. Evaluation methods

- Daily exams
- Submission of assignments
- Participation inside the hall
- Semi-semester and monthly exams

E. Thinking skills

- Develop the student's ability to work on performing duties and deliver them on time.
- Try to apply concepts by solving different types of exercises.
- Develop the student's ability to dialogue and discussion.
- Opening the way for the student to provide what he sees regarding the material.

F. General and transferable skills (other skills related to employability and personal

| |

| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 12/10/2022 |
| 9. Course Objectives: | |
| This course is a second course on electric circuits. The course is designed to provide | |

students with a knowledge on circuit analysis by Introducing the topic and illustrating its importance for electrical engineering field: Laplace transform and relation between current and voltage for resistance, capacitance and inductance, Laplace transform and its applications in electric circuit the concept of magnetic coupling, Analysis of magnetic coupled circuits, Linear transformers, Ideal transformers. Two-port networks and its different equation forms, Evaluation of its parameter, Interconnected two-port networks, Frequency response. High-pass, low-pass, Band pass, and Band-stop filters. Revision and a set of solved examples.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Analyze Laplace transform and relation between current and voltage.
- Analyze magnetic coupled circuits (Linear and Ideal transformers)
- Understand Two-port networks and its different equation forms.
- Apply frequency response in terms of High-pass, low-pass, Band pass, and Band-stop filters as necessary to simplify circuit analysis

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Daily exams
- Submission of assignments
- Participation inside the hall
- Semi-semester and monthly exams

E. Thinking skills

- Develop the student's ability to work on performing duties and deliver them on time.
- Try to apply concepts by solving different types of exercises.
- Develop the student's ability to dialogue and discussion

F. General and transferable skills (other skills related to employability and personal

| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 23/6/2022 |

9. Course Objectives :

- The course aims to provide the student with skills in dealing with direct current machines.
- Knowledge of the working principle of direct current machines of both types (motors and generators).
- The course aims to provide the student with skills in operating and identifying faults in direct current machines.
- Drawing equations for direct current machines.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Understand the main principles of operation of direct current machines
- Studying the components of machines, winding methods, types of generators and engines, how to control them, and drawing mathematical relationships.

B. Subject-specific skills

- Assigning the student to some group activities and duties.
- Allocating a percentage of the grade to daily assignments and tests.

C. Teaching and learning methods

- Sudden daily and continuous weekly tests.
- Trainings and activities.
- Directing students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Active participation during the lecture is evidence of the student's commitment and responsibility.
- Commitment to the deadline for submitting assignments.
- Semester and final tests express commitment and cognitive and skill achievement.

| 1. Educational institution | Anbar University / College of Engineering |
| 2. University Department / Center | Department of Electrical Engineering |
| 3. Course Name/Code | <i>EE Lab 22/EE2307</i> |
| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class |
| 6. Semester / Year | Second / Second Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 23/6/2022 |

9. Course Objectives :

- The course aims to provide the student with skills in dealing with direct current machines.
- Knowledge of the working principle of direct current machines of both types (motors and generators).
- The course aims to provide the student with skills in operating and identifying faults in direct current machines.
- Drawing equations for direct current machines.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Understand the main principles of operation of direct current machines
- Studying the components of machines, winding methods, types of generators and engines, how to control them, and drawing mathematical relationships.

B. Subject-specific skills

- Assigning the student to some group activities and duties.
- Allocating a percentage of the grade to daily assignments and tests.

C. Teaching and learning methods

- Sudden daily and continuous weekly tests.
- Trainings and activities.
- Directing students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Active participation during the lecture is evidence of the student's commitment and responsibility.
- Commitment to the deadline for submitting assignments.
- Semester and final tests express commitment and cognitive and skill achievement.

Course Description Form

Review the performance of higher education institutions ((review of the academic program))

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve. Prove whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|--|
| 1. Educational institution | University of Anbar / College of Engineering |
| 2. University Department / Center | Electrical Engineering Department |
| 3. Course Name/Code | DC Machines I/ EE2313 |
| 4. Programs in which he enters | |
| 5. Available Attendance Forms | presence |
| 6. Semester / Year | First Semester / Second Academic Year |
| 7. Number of Credit Hours (Total) | 45 |
| 8. The preparation date of this description | 23/9/2022 |
| 9- Course Objectives : | |
| A. Understand the main principles of DC machinery. | |
| B. Studying the components of machines, winding methods, types of generators and motors, how to control it, and drawing mathematical relations. | |
| C- Theoretical study and conducting some applications in the laboratory | |

10. Learning outcomes and teaching, learning and assessment methods

- a. Ability to handle generators, motors
- b. Ability to analyze and study DC machines
- c. Ability to infer and solve problems related to machines
- d. Know the types of losses

B - Subject-specific skills
 B1 – Scientific Reports
 B2 – Graduation Research

Teaching and learning methods

- Continuous sudden and weekly daily tests.
- Exercises and activities.
- Guiding students to some sources that contain examples and exercises to benefit from them.

Evaluation methods

Participation during the lecture.
 Submission of activities
 Quarterly tests, activities and activities.

C- Thinking skills

- C1 - Developing the student's ability to work on performing duties and delivering them on time.
- C2- Try to apply concepts by solving different types of exercises.
- C3- Developing the student's ability to dialogue and discussion.

Teaching and learning methods

- Exercises and sports problems
- Assigning the student some group activities and duties.
- Allocate a percentage of the grade for daily assignments and tests.

Evaluation methods

- Active participation during the lecture is a guide to the student's commitment and responsibility.
- Commitment to the deadline in submitting assignments and research.
- Quarterly and final exams express commitment and achievement of knowledge and skills.
- Apps, exercises and daily assignments

D - General and transferred skills (other skills related to employability and personal development).

D1- Developing the student's ability to deal with the means of technology.

D2- Developing the student's ability to deal with the work,.

D3- Developing the student's ability to deal with multiple means.

D4- Developing the student's ability to dialogue and discussion.

| 11. Course Structure | | | | | |
|----------------------|-------|--------------------------------------|----------------------------------|--------------------------|--|
| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
| First | 3 | Principle of operation of generators | | Theoretical + Discussion | General questions and discussion |
| Second | 3 | Principle of operation of motors | | Theoretical + Discussion | General questions and discussion or exam I |
| Third | 3 | constrictions | | Theoretical + Discussion | General questions and discussion |
| Fourth | 3 | Armature windings | | Theoretical + Discussion | I'm examined. |
| Fifth | 3 | Armature winding schemes | | Theoretical + Discussion | General questions and discussion or exam I |
| Sixth | 3 | Main field | | Theoretical + Discussion | General questions and discussion |
| Seventh | 3 | Types of excitations of DC machine | | Theoretical + Discussion | General Questions |
| Eighth | 3 | Tutorial problem | | Theoretical + Discussion | Group duties |
| Ninth | 3 | Armature reaction | | Theoretical + Discussion | General Questions |
| Tenth | 3 | Process of armature reaction | | Theoretical + Discussion | Monthly exam |
| Eleventh | 3 | Voltage builds up | | Theoretical + Discussion | General Questions |

| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class/ Blended |
| 6. Semester / Year | First / Third Academic Year |
| 7. Number of Credit Hours (Total) | 45 |
| 8. The preparation date of this description | 14-10-2023 |
| 9. Course Objectives: | |
| This course introduces the fundamentals of communication system engineering. Specifically, the analog communication systems (AM and FM). The noise within the communication systems is also introduced. | |

| | |
|--|--|
| 10. Learning outcomes and teaching, learning and assessment methods | |
| A. Knowledge and understanding | |
| • | Understand and analyze communication systems in both the time and frequency domains. |
| • | Understand the principles of amplitude and frequency modulations. |
| • | Understand the sources of the electrical noise and its roles on the communications. |
| B. Subject-specific skills | |
| - | Scientific Reports |
| - | Graduation Research |
| C. Teaching and learning methods | |
| - | Sudden daily and weekly continuous tests. |
| - | Exercises and activities in the classroom. |
| - | Guiding students to some sources that contain examples and exercises to benefit from them. |
| D. Evaluation methods | |
| - | Daily exams |
| - | Submission of assignments |
| - | Participation inside the hall |

| |
|--|
| - Semi-semester and monthly exams |
| E. Thinking skills |
| <ul style="list-style-type: none"> - Develop the student's ability to work on performing duties and deliver them on time. - Try to apply concepts by solving different types of exercises. - Develop the student's ability to dialogue and discussion. - Opening the way for the student to provide what he sees regarding the material. |
| F. General and transferable skills (other skills related to employability and personal development). |
| - Developing the student's ability to deal with academic curricula in communication systems. |

| 5. Available Attendance | Traditional class/ Blended |

| | |
|---|-----------------------------|
| Forms | |
| 6. Semester / Year | First / third Academic Year |
| 7. Number of Credit Hours (Total) | 45 |
| 8. The preparation date of this description | 1/9/2021 |
| 9. Course Objectives : | |
| <ul style="list-style-type: none"> - Introducing the student to the basics of alternating current machines and developing the skill of finding industrial solutions to most of the problems he may encounter in the field of work. | |
| <ul style="list-style-type: none"> - It also prepares the student to be able to deal with all faults and how to choose engines according to the type of condition and calculate efficiency. | |
| <ul style="list-style-type: none"> - In addition to understanding the basics and skills of dealing with electrical transformers and generators. - Preparing engineering staff in the field of electrical engineering - Preparing competent engineers in project implementation and maintenance | |
| <ul style="list-style-type: none"> - Providing engineering consultations and expertise. - Instilling professional ethics in graduates to protect them from corruption and deviance | |

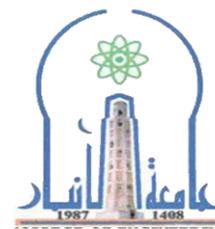

| |
|---|
| 10. Learning outcomes and teaching, learning and assessment methods |
| <ul style="list-style-type: none"> - Dealing with induction machines and transformers of all kinds |

| |
|--|
| <ul style="list-style-type: none"> - Conducting practical experiments that suit the methodological data - Dealing with expected problems in the field of work |
| A. Subject-specific skills |
| <ul style="list-style-type: none"> - Scientific Reports - Graduation Research |
| B. Teaching and learning methods |
| <ul style="list-style-type: none"> - Sudden daily and weekly continuous tests. - Exercises and activities in the classroom. - Guiding students to some sources that contain examples and exercises to benefit from them. |
| C. Evaluation methods |
| <ul style="list-style-type: none"> - Daily exams - Submission of assignments - Participation inside the hall - Semi-semester and monthly exams |
| D. Thinking skills |
| <ul style="list-style-type: none"> - Intellectual questions that include industrial problems and how to solve them - Selection of type and size of motors for different working conditions |
| E. General and transferable skills (other skills related to employability and personal development). |
| <ul style="list-style-type: none"> - Developing the student's ability to deal with academic curricula in English. - Developing the student's ability to deal with the Internet. - Developing the student's ability to deal with multiple means. |

- Develop the student's ability to dialogue and discussion.

| 11. Course Structure | | | | | |
|-----------------------------|--------------|--|---|----------------------------|---|
| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
| 1 | 3 | Single phase winding | Single phase theory | Theoretical + Discussion | General questions and discussion |
| 2 | 3 | Double field theory | Double field theory | Theoretical + Discussion | General written and oral questions and discussion |
| 3 | 3 | Types of 1 phase motor | All Types of 1 phase motor | Theoretical + Discussion | discussion |
| 4 | 3 | Starting torque of single Phase motor | Main equations of Starting torque | Theoretical + Discussion | Exam I am general questions and discussion |
| 5 | 3 | Capacitor type motor | Capacitor motor theory | Theoretical + Discussion | General questions and discussion or exam I |
| 6 | 3 | Three phase induction motor construction | Introduction of three phase induction motor | Theoretical + Discussion | General questions and discussion |
| 7 | 3 | Rotating field for three phase | Rotating field | Theoretical + Discussion | Monthly exam |
| 8 | 3 | Equivalent circuit of 3 phase motor | Exact and approximate Equivalent circuit | Theoretical + Discussion | Discussion with to give collective duties |
| 9 | 3 | Torque -speed in 3 phase motor | Torque - speed characteri | Theoretical + | General Questions |

| | | | | | |
|----|---|---|-----------------------|---------------------------------|----------------------------------|
| | | | stic curve | Discussion | |
| 10 | 3 | Starting torque, maximum torque ,full load torque | Torque ratios | Theoretica l + Discussion | General questions and discussion |
| 11 | 3 | Slip on 3 phase motor | Slip on 3 phase motor | Theoretica l + Discussion | General Questions |
| 12 | 3 | Mechanical load on rotor | Mechanica l torque | Theoretica l + Discussion | General questions and discussion |
| 13 | 3 | Circle calculation of three of 3 phase motor | Circle diagram | Theoretica l + Discussion | General Questions |
| 14 | 3 | Speed control of three phase induction motor | Speed control | Theoretica l + Discussion | Monthly exam |
| 15 | 3 | Starting of three phase induction motor | Starting Methods | Theoretica l + Discussion | Oral exam |

| 1. Educational institution | University of Anbar – College of Engineering |
| 2. University Department / Center | Electrical Engineering Department |
| 3. Course Name/Code | Computer Networks/ EE3323 |
| 4. Programs in which he enters | |
| 5. Available Attendance Forms | Traditional class/ Blendeds |
| 6. Semester / Year | First Semester/Third Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 1/10/2021 |
| 9. Course Objectives: | <ul style="list-style-type: none"> • This course deals with the basic concept of data communications. • To understand the layered architecture of communication protocols. • To learn digital and analog signal transmission and encoding techniques. • To understand multiplexing techniques. |

- Study of network security and encryption methods.
- To understand LAN architectures and systems.

10. Learning outcomes and teaching, learning and assessment methods

- Describe the general principles of data communication.
- Describe how signals are used to transfer data between nodes.
- Describe how packets in the Internet are delivered.
- Explain the concept of dividing a job into layered tasks, the functions of the various layers of the OSI Model.
- Explain the basics of TCP/IP model, functions of the different layers and protocols involved, addressing mechanisms used under the TCP/IP, IPv4 and importantly IP address and IP header format.
- Define the transmission medium and its types, understand various network strategies and topologies.
- Describe how routing protocols work.
- Design and implement a network protocol.
- Explain multiplexing techniques.
- Explain network security and cryptography.
- Discuss the internet elements and their applications.

Subject-specific skills

- Scientific Reports
- Graduation Research

Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

Evaluation methods

- Active participation in the classroom is a guide to student commitment and responsibility.
- Commitment to the deadline in submitting assignments
- Quarterly and final exams express commitment and achievement of knowledge and skills.

| |
|---|
| <ul style="list-style-type: none">• Apps, exercises, and daily assignments. |
| Thinking skills |
| <ul style="list-style-type: none">• Develop the student's ability to work on performing duties and deliver them on time.• Try to apply concepts by solving different types of exercises.• Develop the student's ability to dialogue and discussion.• Opening the way for the student to provide what he sees regarding the material. |
| General and transferred skills (other skills related to employability and personal development). |
| <ul style="list-style-type: none">• Developing the student's ability to dialogue, discuss, solve and deal with various problems. |

| 5. Available Attendance Forms | Traditional class |
| 6. Semester / Year | First / Third Academic Year |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 23/6/2022 |

9. Course Objectives :

- The course aims to provide students with skills in alternating current (AC) machines and transformers.
- Knowledge of the working principle of AC machines of both types (motors and generators).
- The course aims to provide students with skills in operating and identifying faults in AC machines.
- Drawing equations for AC machines and transformers.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Understand the main principles of operation of AC machines
- Studying the components of machines, winding methods, types of generators and engines, how to control them, and drawing mathematical relationships.

B. Subject-specific skills

- Assigning the student to some group activities and duties.
- Allocating a percentage of the grade to daily assignments and tests.

C. Teaching and learning methods

- Sudden daily and continuous weekly tests.
- Trainings and activities.
- Directing students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Active participation during the lecture is evidence of the student's commitment and responsibility.
- Commitment to the deadline for submitting assignments.
- Semester and final tests express commitment and cognitive and skill achievement.

9. Course Objectives:

- This course provides programming and simulink in MATLAB computing environment
- Being able to carry out simple programs in MATLAB to solve scientific and engineering problems.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Become familiar with fundamental operations in Matlab.
- Use matrix forms to describe and solve linear systems of equations.
- Programming with MATLAB to solve mathematical and engineering problems.
- Use MATLAB to generate graphics.
- Use the Simulink simulation package to simulate some electric circuits.

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Daily exams
- Submission of assignments
- Participation inside the hall
- Semi-semester and monthly exams

E. Thinking skills

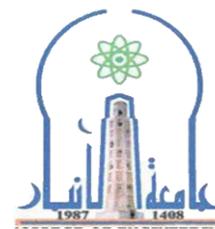

- Develop the student's ability to work on performing duties and deliver

| |

Course Description Form

**Review the performance of higher education institutions
((Academic Program Review))**

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|--|---|
| 1. Educational institution | Anbar University / College of Engineering |
| 2. University Department / Center | Department of Electrical Engineering |
| 3. Course Name/Code | Signals & Systems I/ EE3319 |
| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class/ Blended |
| 6. Semester / Year | first / third Academic Year |
| 7. Number of Credit Hours | 45 |

| | |
|--|-----------|
| (Total) | |
| 8. The preparation date of this description | 10/1/2022 |
| 9. Course Objectives : | |
| <ul style="list-style-type: none"> - To Understand mathematical description and representation of continuous time signals and systems. | |
| <ul style="list-style-type: none"> - To develop input output relationship for linear shift invariant system and understand the convolution operator for continuous time system. | |
| <ul style="list-style-type: none"> - To understand and resolve the signals in frequency domain using Fourier series and Fourier transforms. | |
| <ul style="list-style-type: none"> - To understand the limitations of Fourier transform and need for Laplace transform and develop the ability to analyze the system in s- domain. | |
| 10. Learning outcomes and teaching, learning and assessment methods | |
| A. Knowledge and understanding | |
| <ul style="list-style-type: none"> 1- Represent various types of continuous-time and discrete-time signals, 2- Understand concept of convolution, LTI systems and classify them based on their properties and determine the response of LTI system 3- Determine the impulse response, step response and frequency response of LTI systems. 4-Analyze system properties based on impulse response and Fourier analysis. 5- Analyze the spectral characteristics of continuous-time periodic and a periodic signals using Fourier analysis. | |

| |
|--|
| 6- Understand Laplace transform and its properties and apply the Laplace transform to obtain |
| B. Subject-specific skills |
| <ul style="list-style-type: none"> - Scientific Reports - Graduation Research |
| C. Teaching and learning methods |
| <ul style="list-style-type: none"> - Sudden daily and weekly continuous tests. - Exercises and activities in the classroom. - Guiding students to some sources that contain examples and exercises to benefit from them. |
| D. Evaluation methods |
| <ul style="list-style-type: none"> - Daily exams - Submission of assignments - Participation inside the hall - Semi-semester and monthly exams |
| E. Thinking skills |
| <ul style="list-style-type: none"> - Develop the student's ability to work on performing duties and deliver them on time. - Try to apply concepts by solving different types of exercises. - Develop the student's ability to diagnose the problems. - Opening the way for the student to provide what he sees regarding the material. |
| F. General and transferable skills (other skills related to employability and personal development). |
| <ul style="list-style-type: none"> - Developing the student's ability to deal with academic curricula in signals. - Developing the student's ability to deal with the different systems. - Developing the student's ability to deal with multiple means. |

| 9. Course Objectives: | <ul style="list-style-type: none"> - This course is designed to introduce elements of power system, generation unit, thermal plants, Hydro plants, Steam plants, Nuclear plants. Explain principle of Load factor, capacity factor, transmission line constants, resistance, inductance, single phase two wire, three phase, symmetrical distance, unsymmetrical distance, flat arrangement, horizontal arrangement, hexagonal arrangement. Give an overview of Capacitance, single phase two wire, three phase, symmetrical distance, unsymmetrical distance, flat arrangement, horizontal arrangement, earth effect. Performance design of T.L, short T.L, equivalent circuit, voltage regulation, phasor diagram, Medium T.L, equivalent |

circuit, voltage regulation, phasor diagram, T model, pi model, Long T.L, equivalent circuit, voltage regulation, phasor diagram.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Raising Know the basic concept of power generation.
- Explain the electrical power generations methods.
- Understand the electrical design of transmission line.
- Design a transmission line system by applying mathematical methods.

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Lectures and Tutorials

D. Evaluation methods

- These include quizzes, classroom interactions
- Mid semester exam
- Practical sessions
- Final Exam

E. Thinking skills

- Develop the student's ability to work on performing duties and deliver them on time.
- Opening the way for the student to provide what he sees regarding the material.

F. General and transferable skills (other skills related to employability and personal development).

- Developing the student's ability to deal with engineering concepts
- Developing the student's ability to deal with the Internet.
- Developing the student's ability to deal with multiple means.

11. Course Structure

| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
|----------|-------|-----------------------------------|----------------------------------|---------------------|-------------------|
| 1 | 3 | Introduction to elements of power | Chp.1 | Theoretical + | General questions |

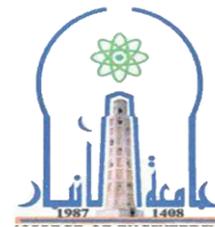

| | | | | | |
|----|---|---|-------|----------------------------------|----------------------------------|
| | | system | | Discussion | and discussion |
| 2 | 3 | Various types of power generating stations | Chp.2 | Theoretical + Discussion | General questions and discussion |
| 3 | 3 | Various types of power generating stations | Chp.2 | Theoretical + Discussion | General questions and discussion |
| 4 | 3 | Load curve and load duration curve, economic factors: load factor, demand factor, and so on | Chp.2 | Theoretical + Discussion | General questions and discussion |
| 5 | 3 | Introduction to the transmission line constants, resistance, inductance | Chp.3 | Theoretical + Discussion | General questions and discussion |
| 6 | 3 | Inductance of single-phase two-wire line | Chp.3 | Theoretical + Discussion | General questions and discussion |
| 7 | 2 | Inductance of three-phase with symmetrical and unsymmetrical distances | Chp.3 | Theoretical + Discussion | General questions and discussion |
| 8 | 3 | Introduction to capacitance of T.L, Capacitance of a Two-Wire Line | Chp.3 | General questions and discussion | General questions and discussion |
| 9 | 3 | Capacitance of a three-phase with symmetrical and unsymmetrical distance | Chp.3 | Theoretical + Discussion | General questions and discussion |
| 10 | 3 | Effect of earth on the capacitance of three-phase transmission lines | Chp.3 | Theoretical + Discussion | General questions and discussion |
| 11 | 3 | Introduction to the transmission lines performance | Chp.4 | Theoretical + Discussion | General questions and discussion |

| | | | | | |
|----|---|--|-------|--------------------------|----------------------------------|
| 12 | 3 | Short T.L, equivalent circuit, voltage regulation, phasor diagram | Chp.4 | Theoretical + Discussion | General questions and discussion |

| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class/ Blended |
| 6. Semester / Year | Third Academic Year- First Semester |
| 7. Number of Credit Hours (Total) | 30 |
| 8. The preparation date of this description | 11/6/2021 |
| 9. Course Objectives : | |
| <ul style="list-style-type: none"> - This course introduces Multistage and compound Configurations , Log and antilog amplifiers, Amplifier frequency response, Differential amplifier , Application to CMOS and BIMOS circuits , Operational amplifier Characteristics , Op -Amp applications : Constant-Gain Multiplier, Voltage Summing, Voltage Buffer, Controlled Sources, Comparator , Active Filters. | |

| |
|---|
| 10. Learning outcomes and teaching, learning and assessment methods |
| A. Knowledge and understanding |
| <ul style="list-style-type: none"> - Understand the Multistage and compound Configurations |

| |
|---|
| <ul style="list-style-type: none">- Understand the Amplifier frequency response, Differential amplifier- Understand the Operational amplifier Characteristics , Op -Amp applications . |
| B. Subject-specific skills |
| <ul style="list-style-type: none">- Scientific Reports- Graduation Research |
| C. Teaching and learning methods |
| <ul style="list-style-type: none">- Sudden daily and weekly continuous tests.- Exercises and activities in the classroom.- Guiding students to some sources that contain examples and exercises to benefit from them. |
| D. Evaluation methods |
| <ul style="list-style-type: none">- Daily exams- Submission of assignments- Participation inside the hall- Semi-semester and monthly exams |
| E. Thinking skills |
| <ul style="list-style-type: none">- Develop the student's ability to work on performing duties and deliver them on time.- Try to apply concepts by solving different types of exercises.- Develop the student's ability to analyze and discuss. |
| F. General and transferable skills (other skills related to employability and personal development). |

- Developing the student's ability to deal with electronics' circuits Frequency response.
- Developing the student's ability to deal operational Amplifiers.
- Developing the student's ability to understand electronic circuits applications .
- Develop the student's ability to analyze and discuss.

11. Course Structure

| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
|----------|-------|---|----------------------------------|--------------------------|---|
| 1 | 2 | Amplifier Frequency Response, log , and Antilog | Chapter 9 | Theoretical + Discussion | General questions and discussion |
| 2 | 2 | Low-Frequency Response— JFET, and BJT Amplifier | Chapter 9 | Theoretical + Discussion | General written and oral questions and discussion |
| 3 | 2 | High frequency response JFET, and BJT Amplifier | Chapter 9 | Theoretical + Discussion | discussion |
| 4 | 2 | Differential Amplifier Circuits, BIMOS and CMOS Differential Amplifier circuits | Chapter 10 | Theoretical + Discussion | general questions and discussion |
| 5 | 2 | Operational Amplifiers Basics | Chapter 10 | Theoretical + Discussion | General questions and discussion |

| | | | | | |
|----|---|--|------------|--------------------------------|----------------------------------|
| 6 | 2 | Operational Amplifier (op-amp) Circuits: Inverting and non-Inverting amplifier, , Summing amplifier, Integrator and Differentiator. | Chapter 11 | Theoretical + Discussion | General questions and discussion |
| 7 | 2 | Progressive Exam-I | | Theoretical + Discussion | Monthly exam |
| 8 | 2 | Op-Amp Specifications – DC offset parameters and Frequency parameters | Chapter 11 | Theoretical + Discussion | General questions and discussion |
| 9 | 2 | Differential and common – mode operation | Chapter 11 | Theoretical + Discussion | General questions and discussion |
| 10 | 2 | Op-Amp Applications: Multiple – stage gains, Voltage Subtraction, Voltage Buffer. | Chapter 11 | Theoretical + Discussion | General questions |
| 11 | 2 | Controlled Sources, Instrumentation Circuits | Chapter 12 | Theoretical + Discussion | General Questions |

Course Description Form

Review the performance of higher education institutions ((review of the academic program))

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve. Prove whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|--|
| 1. Educational institution | University of Anbar / College of Engineering |
| 2. University Department / Center | Electrical Engineering Department |
| 3. Course Name/Code | Control Theory I/ EE4332 |
| 4. Programs in which he enters | |
| 5. Available Attendance Forms | E- presence |
| 6. Semester / Year | First Semester /fourth class |
| 7. Number of Credit Hours (Total) | 90 |
| 8. The preparation date of this description | 1/9/2021 |
| 9- Course Objectives : | |
| A. The correct understanding of the working methods of control systems. | |
| B. Theoretical and simile study on computers of control theories. | |
| C. Design for conventional controllers for all control systems | |

10. Learning outcomes and teaching, learning and assessment methods

To familiarize the student with the history of control science and the most important scientists who made shifts in this science

The student should familiarize himself with the basic units of controlling dealing

The student should know the general structure of the control problem

The student should be introduced to the methods of dealing with traditional control problems

The student should know the goals of control in reducing cost with the largest exit and the fastest response

B - Subject-specific skills

B1 – Scientific Reports

B2 – Graduation Research

Teaching and learning methods

- Continuous sudden and weekly daily tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

Evaluation methods

Participation in the classroom.

Submission of activities

Quarterly tests, activities and activities.

C- Thinking skills

C1 - Developing the student's ability to work on performing duties and delivering them on time.

C2- Try to apply concepts by solving different types of exercises.

C3- Developing the student's ability to dialogue and discussion.

Teaching and learning methods

- Exercises and sports problems
- Assigning the student some group activities and duties.
- Allocate a percentage of the grade for daily assignments and tests.

Evaluation methods

- Active participation in the classroom is a guide to student commitment and responsibility.
- Commitment to the deadline in submitting assignments and research.
- Quarterly and final exams express commitment and achievement of knowledge and skills.
- Apps, exercises and daily assignments

D - General and transferred skills (other skills related to employability and personal development).

D1- Developing the student's ability to deal with the means of technology.

D2- Developing the student's ability to deal with the Internet.

D3- Developing the student's ability to deal with multiple means.

D4- Developing the student's ability to dialogue and discussion.

11. Course Structure

| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
|------------|-------|---|----------------------------------|--------------------------|--|
| First | 3 | Introduction to control system: | | Theoretical + Discussion | General questions and discussion |
| Second | 3 | Mathematical Representation of physical systems: | | Theoretical + Discussion | General questions and discussion or exam I |
| Third | 3 | transfer functions | | Theoretical + Discussion | General questions and discussion |
| Fourth | 3 | electrical systems. | | Theoretical + Discussion | I'm examined. |
| Fifth | 3 | mechanical translation system | | Theoretical + Discussion | General questions and discussion or exam I |
| Sixth | 3 | Block diagrams Processing | | Theoretical + Discussion | General questions and discussion |
| Seventh | 3 | Block diagrams Processing | | Theoretical + Discussion | General Questions |
| Eighth | 3 | Signal flow graphs: | | Theoretical + Discussion | Group duties |
| Ninth | 3 | Signal flow graphs: | | Theoretical + Discussion | General Questions |
| Tenth | 3 | Transient response analysis: | | Theoretical + Discussion | Monthly exam |
| Eleventh | 3 | Transient response analysis: | | Theoretical + Discussion | General Questions |
| Twelfth | 3 | Steady – state error in unity- feedback control system | | Theoretical + Discussion | Discussion and exam I |
| Thirteenth | 3 | Steady – state error in unity- feedback control system: | | Theoretical + Discussion | General Questions |
| Fourteenth | 3 | Routh's stability | | Theoretical | Group Duties+ |

Review the performance of higher education institutions ((Academic Program Review)

This course description provides a summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve, proving whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|---|
| 1. Educational institution | Anbar University / College of Engineering |
| 2. University Department / Center | Department of Electrical Engineering |
| 3. Course Name/Code | Engineering Numerical Methods / EE3211 |
| 4. Programs in which it enters | |
| 5. Available Attendance Forms | Traditional class/ Blended |
| 6. Semester / Year | First / Fourth Academic Year |
| 7. Number of Credit Hours (Total) | 45 |
| 8. The preparation date of this description | 14-10-2023 |
| 9. Course Objectives: | |
| The numerical methods course involves solving engineering problems drawn from all fields of engineering. The numerical methods include: Error analysis, roots of nonlinear algebraic equations, solution of linear and transcendental simultaneous equations, matrix and vector manipulation, curve fitting and interpolation, numerical integration and differentiation, solution of ordinary and partial differential equations. | |
| 10. Learning outcomes and teaching, learning and assessment methods | |
| A. Knowledge and understanding | |
| <ul style="list-style-type: none"> •Be aware of the mathematical background for the different numerical methods introduced in the course. •Understand the different numerical methods to solve the algebraic equations and to solve system of linear and nonlinear equations. •Understand the different numerical methods for interpolation, differentiation, integration and solving set of ordinary differential equations. •Understand how numerical methods afford a mean to generate solutions in a manner that can be implemented on digital computers. •Use the built-in functions in MATLAB and EXCEL. •Create MATLAB functions for solving numerical engineering problems. •Work on multidisciplinary projects. | |
| B. Subject-specific skills | |
| - Scientific Reports | |

| |
|--|
| - Graduation Research |
| C. Teaching and learning methods |
| - Sudden daily and weekly continuous tests. - Exercises and activities in the classroom. - Guiding students to some sources that contain examples and exercises to benefit from them. |
| D. Evaluation methods |
| - Daily exams - Submission of assignments - Participation inside the hall - Semi-semester and monthly exams |
| E. Thinking skills |
| - Develop the student's ability to work on performing duties and deliver them on time. - Try to apply concepts by solving different types of exercises. - Develop the student's ability to dialogue and discussion. - Opening the way for the student to provide what he sees regarding the material. |
| F. General and transferable skills (other skills related to employability and personal development). |
| - Developing the student's ability to deal with academic curricula in numerical methods. |

| 11. Course Structure | | | | | |
|----------------------|-------|----------------------------|---|--------------------------|----------------------------------|
| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
| 1 | 2 | Numerical | Error analysis | Theoretical + Discussion | General questions and discussion |
| 2 | 2 | Numerical | Roots of nonlinear algebraic equations. | Theoretical + Discussion | General questions and discussion |
| 3 | 2 | Numerical | Roots of nonlinear algebraic equations. | Theoretical + Discussion | General questions and discussion |
| 4 | 2 | Numerical | Solution of linear and transcendental simultaneous equation | Theoretical + Discussion | General questions and discussion |
| 5 | 2 | Numerical | Solution of linear equations | Theoretical + Discussion | General questions and discussion |
| 6 | 2 | Numerical | Matrix and vector manipulation | Theoretical + Discussion | General questions and discussion |

| 7. Number of Credit Hours (Total) | 45 |
| 8. The preparation date of this description | 1/12/2021 |

9. Course Objectives:

- The goals of this course are to introduce students to the fundamentals of Programmable Logic Controllers (PLC) and Industrial Automation.
- Upon this course, students will be able to describe PLC components, interface transducer and actuator to PLC ports and create PLC ladder logic diagrams.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Describe the basic properties of PLC architecture and recognize different types of communications techniques with PLC.
- Identify the important transducer and actuator devices used with PLC.
- Learning the programming of PLC via ladder logic diagrams.

B. Subject-specific skills

- Scientific Reports
- Graduation Research

C. Teaching and learning methods

- Sudden daily and weekly continuous tests.
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

D. Evaluation methods

- Daily exams
- Submission of assignments
- Participation inside the hall
- Semi-semester and monthly exams

E. Thinking skills

- Develop the student's ability to work on performing duties and deliver

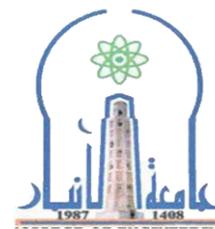

| |
|---|
| <p>them on time.</p> <ul style="list-style-type: none"> - Try to apply concepts by solving different types of exercises. - Develop the student's ability to dialogue and discussion. - Opening the way for the student to provide what he sees regarding the material. |
| <p>F. General and transferable skills (other skills related to employability and personal development).</p> |
| <ul style="list-style-type: none"> - Developing the student's ability to deal with academic curricula in PLC programming. - Developing the student's ability to deal with the Internet. - Developing the student's ability to deal with multiple means. - Develop the student's ability to dialogue and discussion. |

Course Description Form

Review the performance of higher education institutions ((review of the academic program))

Course Description

This course description provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the student to achieve. Prove whether he has made the most of the available learning opportunities. It must be linked to the description of program.

| | |
|---|--|
| 1. Educational institution | University of Anbar / College of Engineering |
| 2. University Department / Center | Electrical Engineering Department |
| 3. Course Name/Code | Power electronics / EE4337 |
| 4. Programs in which he enters | Multisim |
| 5. Available Attendance Forms | E- presence |
| 6. Semester / Year | Second Semester 2021-2022 |
| 7. Number of Credit Hours (Total) | 60 |
| 8. The preparation date of this description | 1/9/2021 |

9- Course Objectives :

A. The student acquires detailed information about the electronic elements and their properties that qualify them to be used in power electronics.

B. The course aims to study some of the three-phase controlled units, where

these units convert the alternating source voltage and has a constant effective value into a variable continuous face, where it is controlled by ignition motors of electronic keys used in this circuit .

C- The course aims to study some DC sections, as these sections aim to convert a voltage

Constant constant source to constant voltage variable value and can be controlled by controlling circuits

Ignition of electronic keys used in section wires at the time of separating and closing electronic keys.

D- The course aims at some single-phase inverters, where these inverters are used to convert the constant constant source voltage into a constant alternating voltage or variable value, where this voltage is controlled by controlling the closing and disconnection time of the electronic keys used in these inverters and also by controlling the value of the liter required to separate and close these electronic switches.

10. Learning outcomes and teaching, learning and assessment methods

A. Knowledge and understanding

- Making the scientific science of power electronics appear for the student in an accessible manner and for those interested in knowing and studying this science as a stage that they can start with the help of other valuable references.
- Give the student experience in electronic elements, whose function is keys to separate and close electronic circuits and apply these elements to make the required control of power electronics circuits..

B - Subject-specific skills

- B1 – Scientific Reports
- B2 – Graduation Research

Teaching and learning methods

- Continuous sudden and weekly daily tests .
- Exercises and activities in the classroom.
- Guiding students to some sources that contain examples and exercises to benefit from them.

Evaluation methods

Participation in the classroom.
Submission of activities
Quarterly tests, activities and activities.

C- Thinking skills

- C1 - Developing the student's ability to work on performing duties and delivering them on time.
- C2- Try to apply concepts by solving different types of exercises.
- C3- Developing the student's ability to dialogue and discussion.

Teaching and learning methods

- Exercises and practical problems
- Assigning the student some group activities and duties.
- Allocate a percentage of grade tofor daily assignments and tests.

Evaluation methods

- Active participation in the classroom is a guide to student commitment and responsibility.
- Commitment to the deadline in submitting assignments and research.
- Quarterly and final exams express commitment and achievement of knowledge and skills.
- Apps, exercises and daily assignments

d. General and transferable skills (other skills related to employability and personal development).

- D1- Developing the student's ability to deal with the means of technology.
- D2- Developing the student's ability to deal with the Internet.
- D3- Developing the student's ability to deal with multiple means.
- D4- Developing the student's ability to dialogue and discussion.

| <ul style="list-style-type: none"> - B1 - Scientific reports - B2 - Graduation research |
| <p>c. Teaching and learning methods</p> |
| <ul style="list-style-type: none"> - Sudden daily and weekly continuous tests. - Exercises and activities in the classroom. - Guiding students to some sources that contain examples and exercises to benefit from them. |
| <p>A. Evaluation methods</p> |
| <ul style="list-style-type: none"> - Daily exams - Submission of assignments - Participation inside the hall |

| |
|---|
| - Semi-semester and monthly exams |
| B. Thinking skills |
| <ul style="list-style-type: none"> - Intellectual questions that include industrial problems and how to solve them - Selection of type and size of motors for different working conditions |
| C. General and transferable skills (other skills related to employability and personal development). |
| <ul style="list-style-type: none"> - Developing the student's ability to deal with academic curricula in English. - Developing the student's ability to deal with the power system. - Developing the student's ability to deal with multiple means. - Develop the student's ability to dialogue and discussion. |

| 11. Course Structure | | | | | |
|----------------------|-------|---------------------------------------|----------------------------------|--------------------------|---|
| The week | Hours | Required Learning Outcomes | Name of the unit/course or topic | Method of education | Evaluation method |
| 1 | 3 | Introduction of power system analysis | Unit 1 | Theoretical + Discussion | General questions and discussion |
| 2 | 3 | Y-bus | Unit 1 | Theoretical + Discussion | General written and oral questions and discussion |
| 3 | 3 | Introduction of load flow | Unit 2 | Theoretical + Discussion | discussion |
| 4 | 3 | Load flow | Unit 2 | Theoretical + Discussion | Exam I am general questions and |

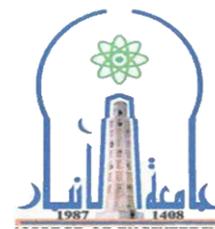

| | | | | | |
|----|---|--|--------|--------------------------|--|
| | | | | | discussion |
| 5 | 3 | Newton Raphson method | Unit 2 | Theoretical + Discussion | General questions and discussion or exam I |
| 6 | 3 | Calculation of Newton Raphson method | Unit 2 | Theoretical + Discussion | General questions and discussion |
| 7 | 3 | G.S method | Unit 2 | Theoretical + Discussion | Monthly exam |
| 8 | 3 | Calculation of G.S method | Unit 2 | Theoretical + Discussion | Discussion with to give collective duties |
| 9 | 3 | Introduction of power system stability | Unit 3 | Theoretical + Discussion | General Questions |
| 10 | 3 | Stady stat stability | Unit 3 | Theoretical + Discussion | General questions and discussion |
| 11 | 3 | Calculation of study stat stability | Unit 3 | Theoretical + Discussion | General Questions |
| 12 | 3 | Transient stability | Unit 3 | Theoretical + Discussion | General questions and discussion |
| 13 | 3 | Calculation of study Transient stability | Unit 3 | Theoretical + Discussion | General Questions |
| 14 | 3 | Power system protection | Unit 3 | Theoretical + Discussion | Monthly exam |
| 15 | 3 | Power system protection | Unit 3 | Theoretical + Discussion | Oral exam |

12.Infrastructure

Required readings:

- Course Books

(Elements of power systems analysis by
