اسم المادة باللغة الإنكليزية : Computer

اسم المحاضرة الخامسة باللغة العربية:

اسم المحاضرة الخامسة باللغة الإنكليزية : windows Part Two

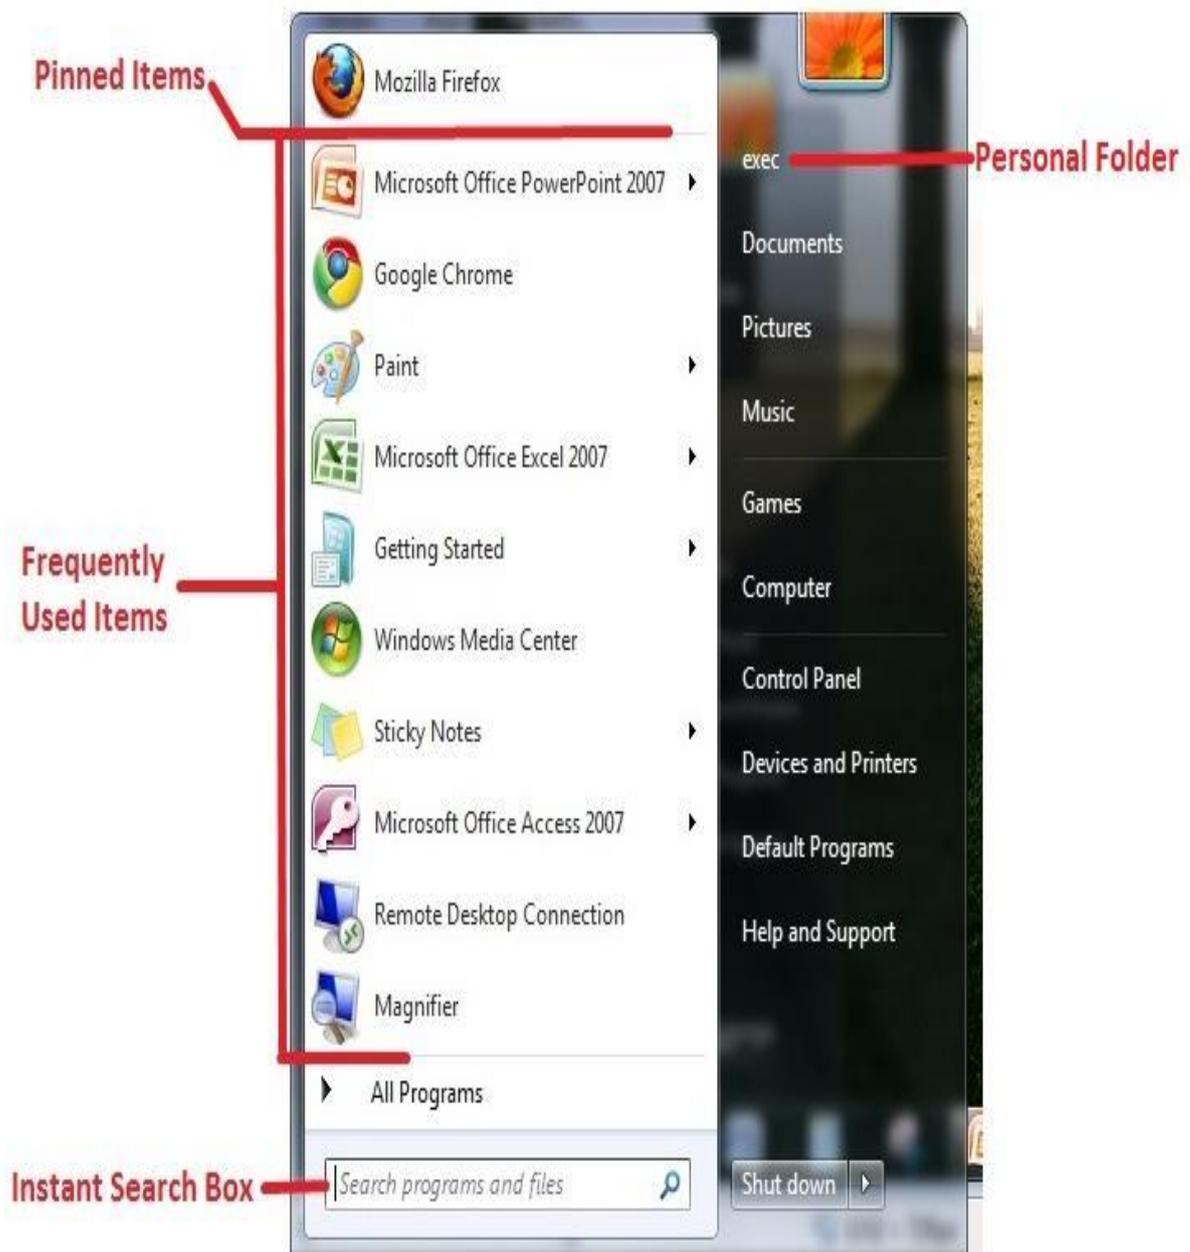

Windows 7

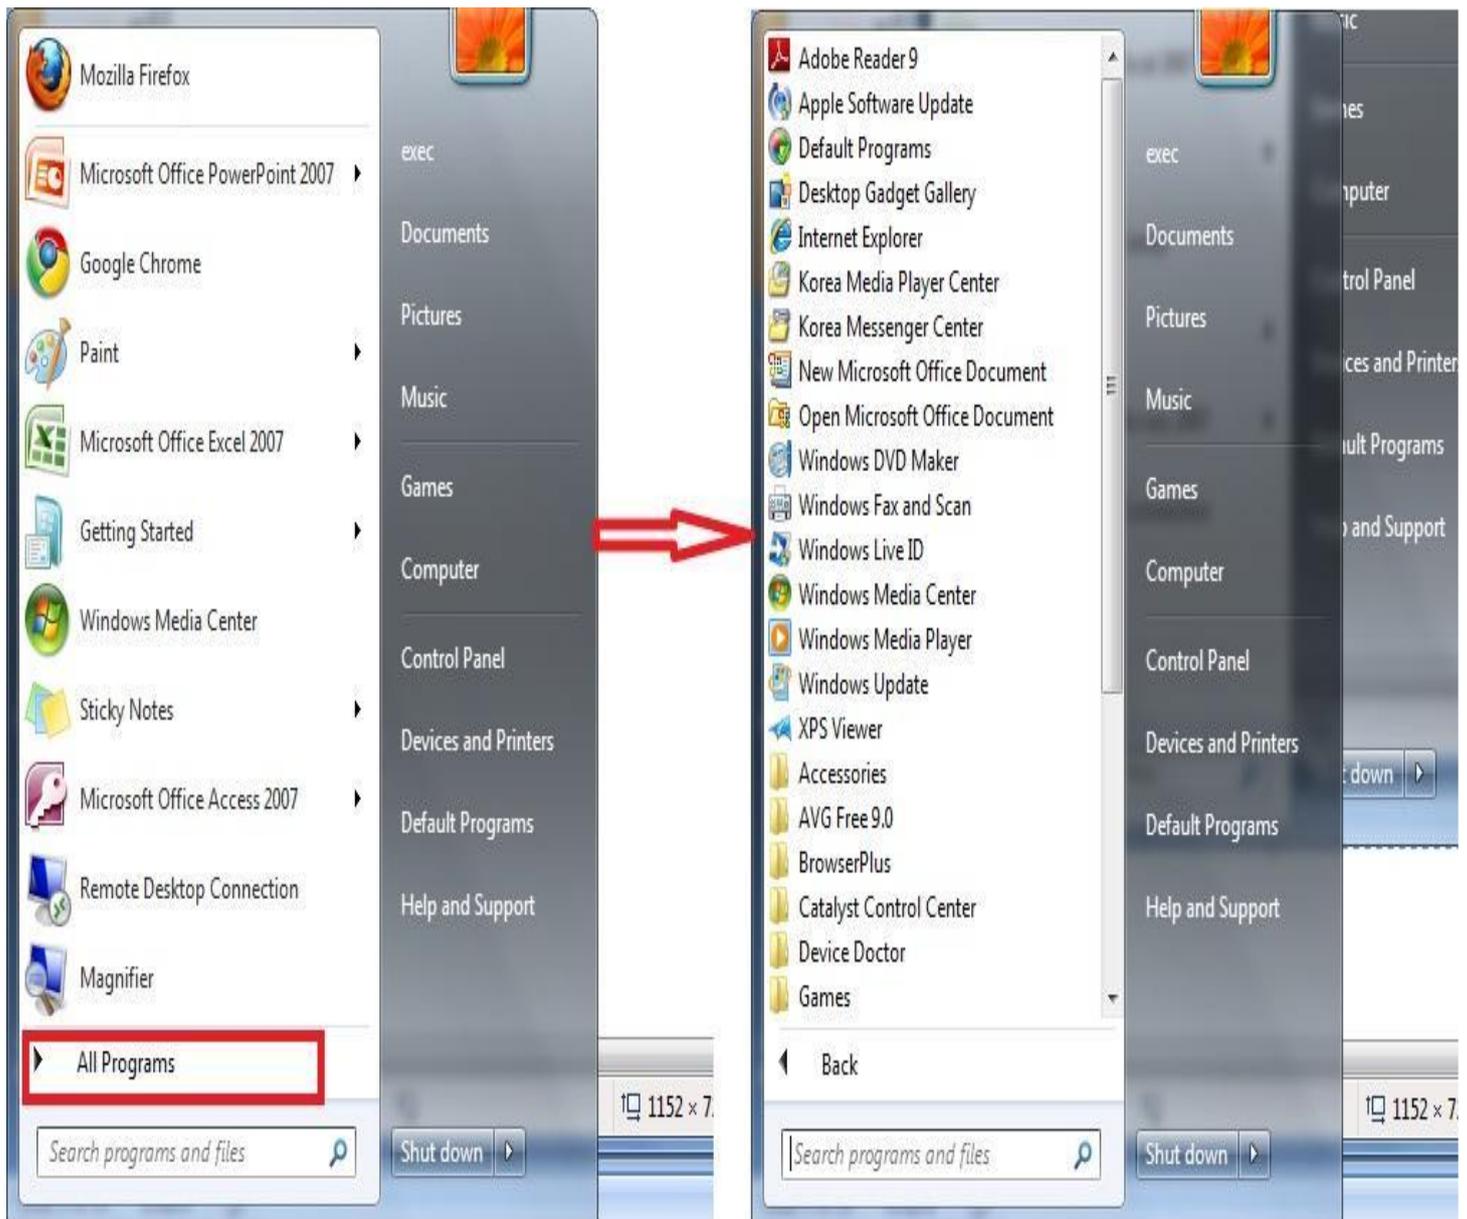

Start Menu

The Windows interface provides a combination of menus and icons that allow you to interact with a computer. You can use a mouse to make selections, and issue commands, such as opening a program. An example of a commonly used program is Microsoft Paint.

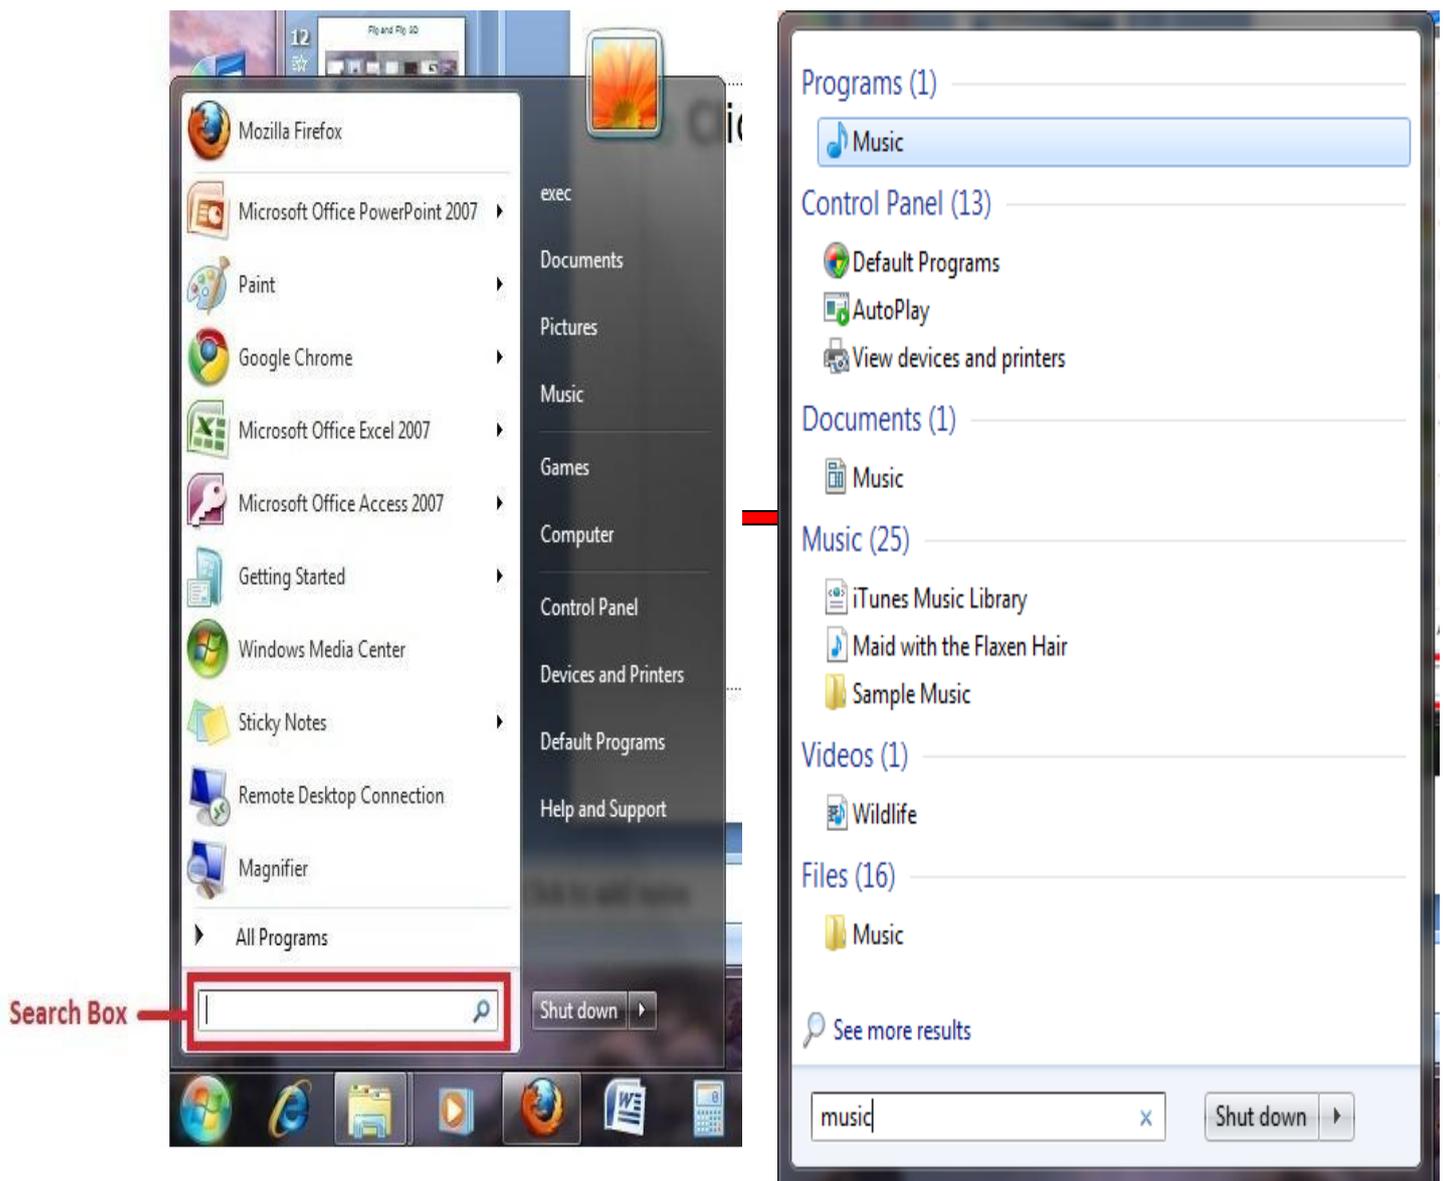

You can open the Microsoft Paint program from the Accessories menu. The Microsoft Paint program is displayed in a window.

To access all the programs installed in your computer, click the
Start Button and then point to All Programs

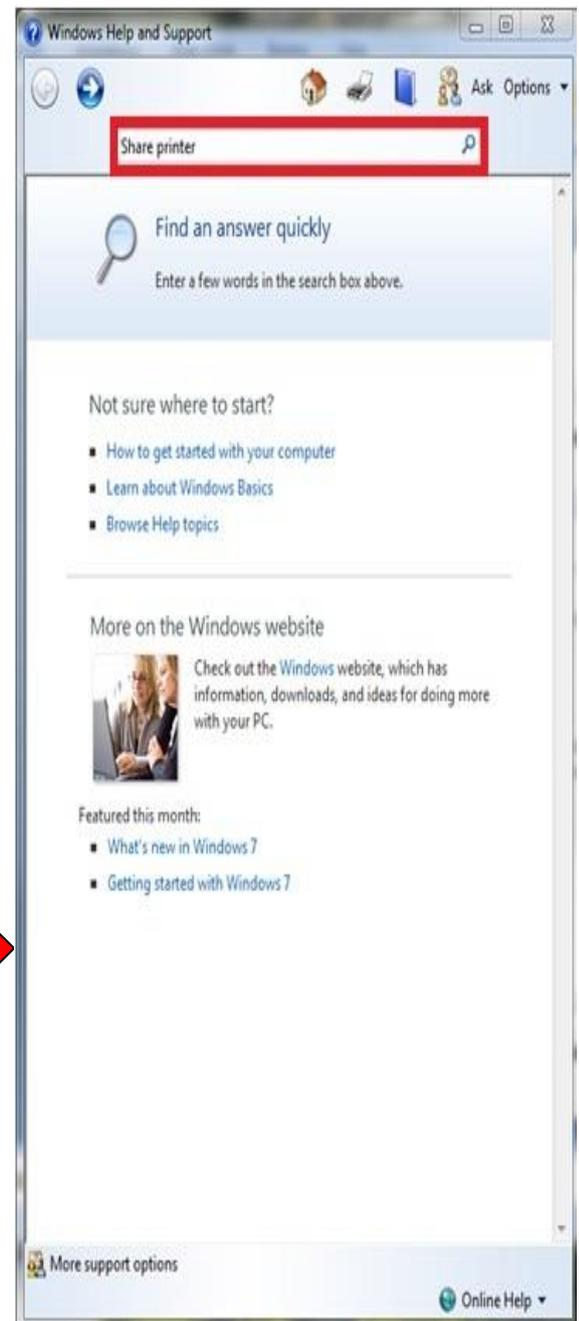

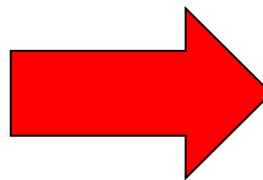

Start Menu (Search)

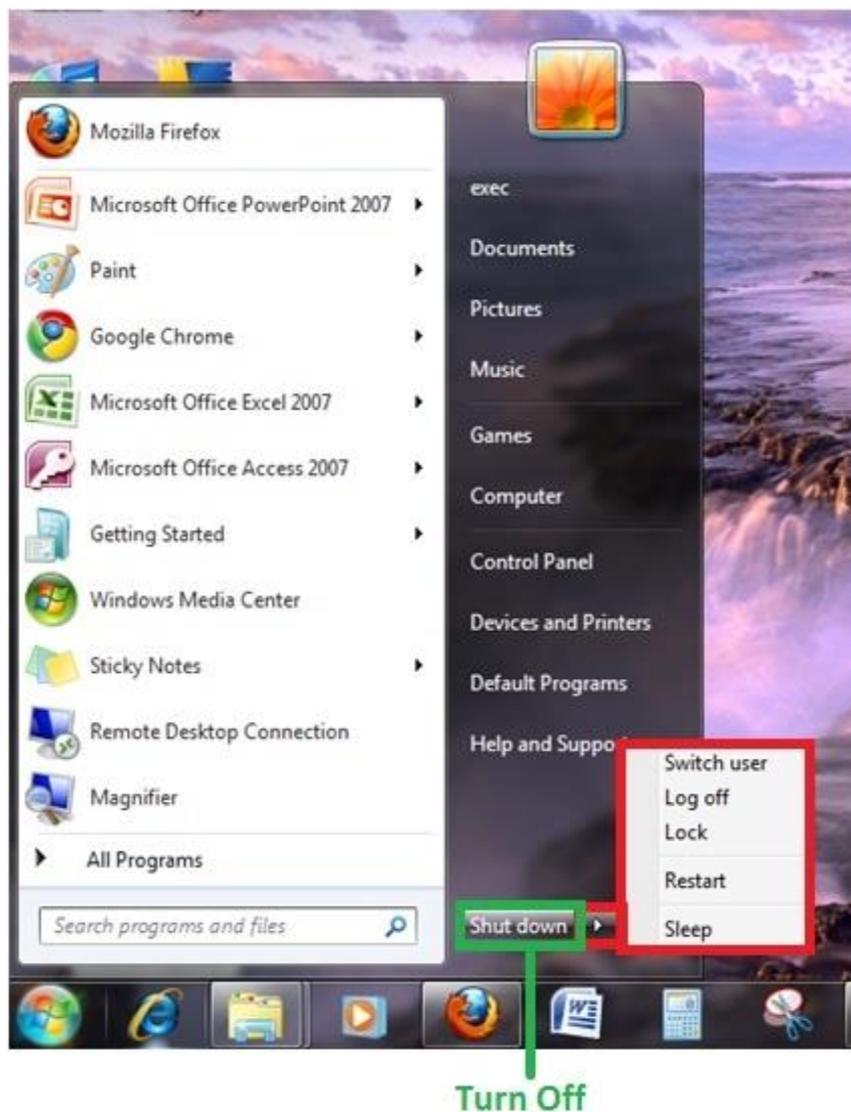

Help and Support

You can get information about how to perform a task, for example sharing a printer, by clicking the Help and Support button in the Start Menu.

Power Button Options

- ❖ Switch User: allows you to log on with a different account without quitting the programs that the current user is running.
- ❖ Log off: quits all the programs and takes you to the Log On screen.
- ❖ Lock: takes you to the Log On screen without quitting any open programs so nobody can access your account if you walk away from the computer.
- ❖ Sleep: allows you to save energy by turning off the monitor. You can awaken the computer by moving the mouse or pressing any key on the keyboard.

Taskbar

You can point to an active program in the Task bar to see a live thumbnail.

The icons on the Taskbar can be rearranged by simply dragging them

Pinning Programs to the Taskbar

To pin a program to the Task bar drag the icon and release it anywhere on the bar.
